

75 electric cars for Scheuch employees

75 Scheuch Group employees from all over Upper Austria are delighted to be new electric car owners and are sustainably protecting the environment.

Electric vehicles are an important step towards sustainability. The environmental technology company Scheuch is going on the offensive with its climate-neutral mobility programme and setting another example for climate protection. With 75 electric cars for employees, the Scheuch Group is taking on an important pioneering role for companies and actively supporting the introduction of electric mobility on a large scale.

Mobility programme for zero emissions

"The Scheuch Mobility Programme was launched in summer 2022 and one of the projects is the offer for employees to lease an electric car with the support of the company," say the project team Matthias Schmee, Elisa Hilpold, Scheuch Human Resources and Aida Foric, Fleet Manager. The concept presentation and the offer met with great interest from many people. And now the time has come: for some employees, the anticipation is already turning into driving pleasure. The first cars were handed over in April and in a few weeks, a total of 75 Scheuch employees from the Innviertel region and neighbouring regions will be owners of a CO₂-neutral vehicle, the all-electric CUPRA Born. The entry into e-mobility has been a perfect success. From now on, all journeys to the company or privately, as well as journeys for family members who can also use the car, are emission-free.

Many thanks to all contributors

"We would like to thank our partners who have supported us so helpfully in the project. Especially Autohaus Priewasser in Ried im Innkreis, Porsche Austria GmbH & Co OG in Salzburg and LeasePlan Österreich Fuhrparkmanagement GmbH, with whom we were able to work out an attractive package for the CUPRA Born," says the project team. The modern design on the car was created together with the labelling experts Pfeil Design from Ried im Innkreis.

Responsibly into the future

"We want to act as an accelerator for e-mobility, because the mobility turnaround can only succeed together. Talking about sustainability is not enough for us. An ecological conscience costs money and must be promoted. Not only because we are an environmentally friendly company, but also because we are aware of our social and environmental responsibility," says Stefan Scheuch, CEO Scheuch Group.

The first employees are now travelling electrically. But the project is not over yet. The next major order is already planned for the autumn. Everyone at Scheuch should get the chance to jump on the future-orientated bandwagon.

Scheuch is once again demonstrating its exemplary commitment to its employees and the environment.

About Scheuch Group:

The Scheuch Group is a family-owned business whose goal is to make a positive impact to protecting the earth and local communities with sustainable technologies for air pollution control. For more than half a century, the Upper Austrian company has been working to reduce particulate matter and emissions from the air by means of extraction, dust removal, conveying and flue gas cleaning. These technologies and others also reduce noise and odors that are produced during the manufacturing process. In addition to serving the industrial minerals, energy, metal, wood-based materials, glass and wood industries, the core business also includes service and components. Customers can leverage all or any of the services the company delivers from sales, project management, design, research & development, manufacturing, assembly, commissioning and after-sales service. Today, the Scheuch Group and its more than 1,500 employees and subsidiaries across the globe, is regarded as a leading international environmental technology company.
